

How to Update: **WRECKER G2**

Requirements: Windows 7, 8, or 10

Suggestions:

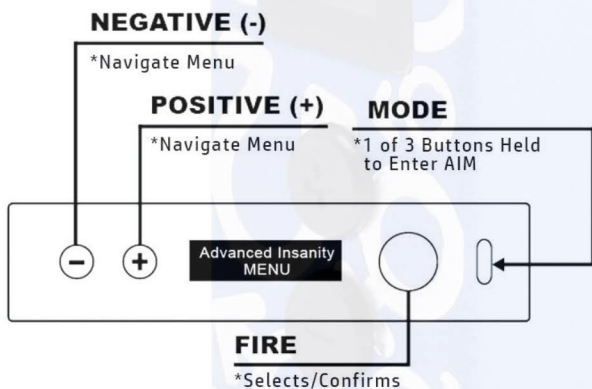

- Disable any firewall program(s) that may interfere with communication between Wrecker G2 & Update Software
- Download FSK Update Software & OS-Hybrid System firmware (found on HohmTech.com)
- Download manual with latest information on Wrecker G2 (found on HohmTech.com)

STEPS:

- Open FSK Update Software
- Load OS-Hybrid System firmware (click "Open" button on FSK Update Software, locate file, select it)
- Connect USB cable to computer & Wrecker G2
- If any prompts come up, select "Yes", "OK", "Allow" etc.
- Using Wrecker G2, go to AIM (press & hold MODE button with both +/- buttons simultaneously for 2 seconds)
- Navigate menu to "Update Port" by using either + or - button
- With "Update Port" displayed on Wrecker G2 screen, hit FIRE button on Wrecker G2, use + or - button to navigate to "ON"
- With "ON" displayed in the "Update Port" option, hit FIRE button on Wrecker G2 to confirm "ON" selection
- Wrecker G2 screen will display "LINK" or "Link to CPU"
- As Wrecker G2 will begin to communicate with FSK Update Software, the "Update" button becomes active
- Click "Update" button on FSK Update Software. Once complete, click "Leave Update" to refresh chip
- Click "Exit" button on FSK Update Software after Wrecker G2 begins to power down
- You're done

Troubleshooting:

- If above steps do not resolve make "Update" button active, make Windows reveal hidden files/folders. Select the hidden folder titled "Driver" revealed in the FSK Update Software directory. In the "Driver" folder, there are 3 drivers titled: "dpinst_amd64", "dpinst_ia64", & "dpinst_x86". 1 by 1, select them to see if Windows is missing driver. Repeat above STEPS
- If above troubleshooting step does not resolve issue, we advise using Windows 10 as it has a full driver automation system which will make update process smooth

OPTIONAL DRIVERS (needed if Windows missing driver)

*the "view hidden files" must be enabled in Windows to display these drivers
